- And Much More...

The Steadicam Ultra²

The NEW Ultra² is the world's best Steadicam with the most advanced features. User-friendly and field-serviceable, tool-free, straightforward and versatile, the Ultra² makes your operating better and hassle-free.

The new G-70 arm is light, (under 11lbs.) and strong. It's dual co-axial springs can lift 13-70 pounds with a boom range that exceeds any other arm out there – 32 inches! It is by far the smoothest, most responsive arm ever built. The first time you can feel how the arm behaves, regardless of the weight you are carrying. With the "Geo" feature, you can tune your arm to your preferences for each shot. Even the arm post system incorporates an adjustable drag that does not change when you change posts.

The Ultra² monitor mount is stronger, easier to flip for low mode, and has a wider range of positions, both vertically and horizontally.

The UltraBRITE² third generation color high definition monitor is simply awesome - HDSDI, HD component, and composite - 1400 nits.

**The Ultra² –
There's Nothing
Else Like It!**

The new Steadicam/IDX Power Cube™ is the most advanced available. The two-battery 29.6 volt system easily handles 10 amps continuously, and up to 24 amps for short periods of time. Each battery is rated at 6000mAh - they can handle any camera's power requirements. You can even rotate the battery horizontally or below the rods to balance heavy cameras or to control the sled's inertia.

Circuit boards, both in the base and the camera mounting stage, make for reliable connections, easy upgrades, and servicing.

Hidden in the bottom dovetail is an adjustable shelf for mounting a Mini-DV camera or digital recorder. The voltage on the accessory power jack is user adjustable.

The Ultra² vest is the strongest front-mounted vest in the world.

Double Vee shoulder clips, cross back straps, new spar and clamps, and over center buckles, provide the most secure comfortable fit. Light and unobtrusive, it works with your body and the G-70 arm to produce the smoothest possible shots. And the Ultra² vest still has the world's best quick release system. Available in two basic sizes, regular and compact. Also available with larger pads and straps for you bigger guys!

Major improvements to the sled include a super stiff camera mounting stage with "go to" motors, a deeply integrated tilt head, and a wider range of adjustment than ever before.

Positive locking post clamps means that nothing sticks out to catch you or a cable. The Ultra² Gimbal is incredibly strong and the post clamp blends into the handle for a better operating grip. There's even an ergonomic remote control for the "go to" stage motors.
